

ABSTRACT

A trampoline includes a flexible mat 1, a plurality of resiliently flexible rods 2 each having a lower end retained in a frame 3 of the trampoline and an upper end coupled to the periphery of the flexible mat 1, and a region of contrasting colour to the colour of mat about a peripheral portion of the mat at or adjacent the peripheral edge of the mat. The region of contrasting colour may be provided by one or more concentric circles 9, a sinuous line 12, a zig-zag 13, or a plurality of discrete by discrete non-continuous areas 14 of contrasting colour for example.
